

Doosan Forklift Part

Doosan Forklift Part - Doosan Infracore Company Ltd. is an international and intercontinental corporation that features Defense Industry Products, Industrial Vehicles, Diesel Engines, Automation Systems, Machine Tools and Construction Equipment.

In the U.S.A., Doosan Infracore America Corporation is headquartered in Suwanee, Georgia. It is home to a 170,000 square foot manufacturing facility, which is the home of the Compact Equipment and Construction division. West Caldwell, New Jersey is home to the Machine Tool division and Cleveland, Carrollton is home to the Lift truck division. The U.S. headquarters in Georgia facilitates a first rate parts operation capable of supplying an excess of 25,000 line items to support Lift Truck, Compact Equipment, Machine Tool and Construction customer needs.

There are well over 220 Doosan service and sales locations operating in Canada and the United States. Additionally, there are more than 90 independent sellers moving forklift materials and materials handling equipment. This system allows Doosan Infracore America to aggressively compete in this competitive marketplace. The forklift product line remarkably features 63 different versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion vehicles. Capacities of these numerous truck models range from 3,000 to 33,000 lbs. All trucks are manufactured in an ISO 9001 qualified facility.

Doosan Infracore America is the fastest growing forklift and lift truck company in the North American marketplace, thanks to its exceptional level of product performance and their consistently high level of customer support and service given to all Doosan Infracore Forklift clients. The U.S. lift Truck division based in Cleveland has a skilled team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

Korea's initial home-based lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a national machinery expansion project. Early sales of this manufacturing equipment focused on large business communities, the armed forces and on state-run corporations. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Daewoo began the first home-based forklift business in 1967, and quickly gained a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological enhancements combined with sales success placed them in a position of significant expansion of their lift truck business.

Caterpillar Industrial Inc. of the U.S. in 1981, proposed a cooperative venture project to help them in the very competitive North American materials handling industry. This project proved highly lucrative for Daewoo and their lift truck sales expanded greatly. In 1984, the company completed development of a new facility to help in manufacturing high end value-added goods for export. In 1993, the company had a international sales network and started exporting versions they had established through in-house expertise, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
